Remove Duplicate Contacts is a powerful and easy-to-use Microsoft Outlook Add-In for searching and processing of duplicate contacts in Microsoft Outlook folders. Features High-speed searching and processing (delete, copy, move). More than one Million contact items supported. Compare attachments and attached files of all contact copies. Easy to change the option: Work for all users on this computer, or only work for the current user. Easy to enable or disable this addin. You can use the add-in for Outlook to find contact copies both in a single folder and in different folders. A duplicate contact item found can be: Deleted Copied to any folder you choose Moved to any folder you choose Latest version: 4.1 Operating System: Windows 2000, Windows XP, Windows 2003, Windows Vista, Windows 2008, Windows 7 Microsoft Office Outlook 2007 and Outlook 2003 Business Contact Manager 2007 and 2003 Supported Remove Duplicate Contacts can be used to find contact copies both in one folder and in different folders. A duplicate contact item found can be deleted, copied or moved to any folder you choose. There are two different work modes in Remove Duplicate Contacts: Search for duplicate contacts in each individual folder In this mode, the program processes each selected folder separately, with no relation to other folders. Two identical contacts are deemed duplicates provided they are stored in the same folder. The work mode is designed to search for duplicate contacts stored in the same folder. It will help you to get rid of unneeded contact copies in one or several folders. Search for duplicate contacts across a group of folders according to their priority When this mode is chosen, the program will search for duplicates of a contact item not only in the same folder, but also in all other folders you selected. If some identical contacts are stored in different folders, the contact stored in the high-priority level folder you choose, as "Important Contacts", will be left intact, the others will be processed (deleted, copied, moved). In this mode, you can find and process (delete, copy, move) duplicate contacts stored in different folders. You may find it helpful when you want to clean your contact folders from contact copies made "just in case", which you do not need any more. Using the priority system provided with this mode, you can specify, for example, two identical contacts stored in the folders "Important Contacts" and "Temporary Folder", the contact in the temporary folder that should be considered duplicate and hence needs to be deleted (copied, moved). Remove Duplicate Contacts also allows the setting of a specific creation time range for duplicate contacts to be processed (deleted, copied and moved). This feature will help you to save time by excluding contacts from archive folders and other folders of the kind from processing. High-speed searching and processing (delete, copy, move). More than one Million contacts supported. Compare attachments and attached files of all contact copies. Easy to deploy to client computers in your Enterprise or Organization. Easy to install and uninstall this software. Easy to enable or disable this addin. Small file size: only about 900 KB! (less than 0.9 MB) Fast start up and use it immediately!
